

Sprint 2 Plan

Runners Match

habtInc.

Harmen Kang, Austing King, Brandon Jacobson, Tyler Rule

Sprint Completion date: 10/27/19

Revision: 0, 10/21/19

Goal: Create user sign up and profile creation as well a search function for profiles.

Task listing, organized by user story:

User Story 1: As a user I want to be able to search through other profiles on RunnersMatch and show my interest in training with profiles I find interest in.

-To do this we need to establish a database to store user login and create the sign up web page in 4 days since it will be the larger portion of work in the web page. (4 hours)

User Story 2:(From backlog of Sprint 1): As a user I want to be able to create a profile and fill it with my fitness data.(2 hours)

-To do this we need to create a page to enter user data into our firebase database

User Story 3: As a user I want RunnersMatch to show me possible training partners with similar goals. (3 Hours)

-To do this we need to add a profile page that interacts with the database to access profiles and store searchable preferences and ratings in 3 days since it will be a lot of database work which we are currently unfamiliar with.

Team roles:

Harmen Kang: Scrum Master

Austin King: UI

Brandon Jacobson: Databases

Tyler Rule: Strava Integration

Initial task assignment:

Harmen Kang: As a user I want to be able to make a personalized profile on RunnersMatch so that I can find running partners that I know I will get along with.

-To do this we need to establish a database to store user profiles and have a profile web page to view it all in.

Austin King: As a user I want to be able to search profiles with certain running preferences such as weekly mileage, average running pace, terrain preference, and ideal qualities in a training partner.

-To do this we need to add a search function for created profiles.

Brandon Jacobson: As a user I want to be able to visit a home webpage for this Service and be able to navigate to my profile and other users' profiles.

-To do this we will need to establish a home page for users that redirects to our other webpages.

Tyler Rule: As a user I was to be able to go to a page to search for my possible running partners and filter by what workout I want to do.

-To do this we will need to create a matches page to sort through profiles of other runners.
